

Bubo Social Data & Privacy Disclosure

BUBO SOCIAL · The Wiser Way To Connect

Official Brand Node: bubo-social.com

At Bubo Social (bubo-social.com), symbolized by our intelligent owl mascot, we believe your social network should be a digital utility that serves your life—not an invasive surveillance machine. We reject the deceptive 'attention economy' models of legacy platforms like Facebook. Because your data belongs entirely to you, our architecture is built upon absolute isolation, daylight transparency, and complete user sovereignty.

Here is exactly how we handle your digital footprint and why Bubo Social is a fundamentally safer, wiser space for human connection:

1. Zero Cross-Site Surveillance

- **The Old Way:** Legacy networks constantly track your background browser history, shopping apps, and private location data using invisible tracker codes embedded across the internet.
- **The Bubo Social Way:** We enforce zero external or cross-site tracking capabilities. What you do outside of our application is entirely your own business. We ban third-party data-harvesting trackers and data brokers from entering our platform ecosystem.

2. Multi-Persona Isolation & Permissions

- **The Old Way:** A single public post or family update can easily collide with your professional life because legacy platforms merge your extended family, coworkers, and hobbies into one giant, searchable database record.
- **The Bubo Social Way:** Our unique architecture sandboxes your profile into three strictly isolated environments using explicit color barriers:
 - **Close Circle (Gold Theme):** A secure, private environment for close friends and family, completely hidden from public view. Features the Shared Vault for private photo caching.
 - **Professional (Blue Theme):** A polished networking environment featuring your Professional Portfolio resume card, keeping your industry links separate from personal updates.
 - **Public (Green Theme):** An expansive public canvas displaying your Food-Catch local drop collaborations and your My Catches video grids. Data never leaks across these boundaries without your manual permission.

3. Transparent Feed Choices (The Anti-Manipulation Toggle)

- **The Old Way:** Hidden corporate algorithms manipulate your feed to surface outrage and political division, driving up platform 'time on site' to inflate ad revenues.
- **The Bubo Social Way:** We feature no hidden algorithmic manipulation. Your workspace feed defaults to a clean, finite Chronological Feed. Once you are caught up on real-time posts from accounts you explicitly follow, the feed halts with a 'You're all caught up' card so you can look up from your screen. The Discover Feed is completely transparent and opt-in, focusing entirely on public interest groups, local mixers, and live streams you choose to explore.

4. Direct Location Control via Food-Catch

- **The Old Way:** Background services continuously pin your exact smartphone GPS coordinates to map your real-world routines for targeted hyper-ads.
- **The Bubo Social Way:** We use your user-declared Country, State, and Zip Code purely as a voluntary destination anchor to power our localized Food-Catch merchant tool. This matches your neighborhood dining layout to flash, time-capped kitchen deals without ever tracking your physical footsteps or daily travels.

5. Verified Safety at Registration

- **The Old Way:** Platforms allow bad actors, fraud rings, and anonymous bots to spoof locations seamlessly, destroying community trust in local groups.
- **The Bubo Social Way:** We verify physical connections using real-time country matching checks at registration while banning hidden proxy and VPN signups to eliminate scammers. Once you are securely registered, your global portability is fully protected—allowing you to log in securely using your origin token when traveling internationally.

6. Full Graph Sovereignty & Portability

- **The Old Way:** Networks hold your relationships hostage, trapping your hard-earned connections, photos, and group data on their proprietary servers.
- **The Bubo Social Way:** You maintain absolute data sovereignty. If you ever choose to close your account, you can instantly export your entire social graph, interaction history, and photo vaults in a portable, open-source file block to take your relationships wherever you choose.
